➤ ABOUT

AI software engineer focused on production-grade LLM systems. Master's thesis topic: two agentic AI pipelines combining RAG, vector search (Pinecone), and PageIndex Tree retrieval on self-hosted N8N. Currently building an AI face-recognition system in production. 2.5 years as a university teaching assistant across 10+ CS subjects.

➤ MASTER'S THESIS PROJECT

Agentic AI Automation Systems, International Burch University.

June 2026

- Built two production-ready AI agents on self-hosted infrastructure
- Executed 1,000 test cases per system
- Customer Support Chatbot: hybrid retrieval architecture combining PageIndex Tree with Pinecone-backed RAG, confidence scoring, conversational memory, and automatic escalation via Telegram
- Personal Virtual Assistant: LLM-driven automation for email management, calendar scheduling, and task coordination
- Stack: JavaScript, self-hosted N8N, Anthropic, Gemini, and OpenAI APIs, Pinecone, PageIndex, Gmail API, Telegram Bot API

➤ WORK EXPERIENCE

Software Engineer Intern

Sep 2025 - June 2026

- Working on the development of a full-stack application based on client's needs
- Developing an AI face recognition system that identifies objects from video footage using reference images (Python, face_recognition / dlib)
- Built secure REST backend and frontend applying OWASP Top 10 best practices - authentication, input validation, session management
- Developed custom scrapers for data ingestion pipelines

Teaching Assistant, International Burch University

Feb 2024 - Present

- Lead lab sessions across 10+ CS courses: Python, web and mobile development, GDPR regulations
- Designed and published a beginner-friendly SQL course on the university's Decamas e-learning platform
- Host the annual Freshman Welcome Day; run Python workshops for high-school students; mentor domestic and international students as a Buddy

➤ EDUCATION

M.Sc. Information Technologies (AI Software Engineering), International Burch University [GPA: 9.5]

Oct 2024 - Present

- Master's thesis on agentic AI systems: hybrid RAG retrieval, multi-LLM orchestration, workflow automation
- AI system pipelines: design, deployment, and evaluation of LLM-based applications end-to-end
- Distributed system architectures: monoliths, microservices, peer-to-peer, and large-scale system analysis
- Cloud computing, vector and relational databases, and modern data storage patterns

B.Sc. Information Technologies, International Burch University [GPA: 9.46]

Oct 2021 - Sep 2024

- Full-stack web & mobile development, OS programming, computer networks
- Data science foundations, database design, and infrastructure
- Broad CS foundation across 6+ tracks, enabling cross-domain engineering work

➤ HONORS & COMPETITIONS

Atlantbh Scholarship Recipient, Atlantbh

Dec 2022 - Oct 2023

- Awarded to the top 10 IT students in Bosnia and Herzegovina for academic excellence

3rd Place, EESTech Challenge, EESTech Sarajevo

March 2023

- Built an educational app for children with special needs: transformed books into interactive comics with audio narration, gamification, and progress tracking

➤ CERTIFICATIONS & PROFESSIONAL TRAINING

- Certified Web Application Security Professional (CWASP)
- Advanced Malware Analysis & Digital Forensics
- Hands-On Penetration Testing & Ethical Hacking (CPTP)
- ISO 27001 Implementation Training

➤ PROJECTS

Social Media Analytics Web Application "InstaMetrics"

- Created a web app “Insta Metrics” to collect Instagram users and hashtag information
- Wrote headless browser scripts using Python and Selenium to scrape Instagram data
- Developed a system for sending and scheduling messages on Instagram through the app’s interface

Movies Watchlist Software Engineering Project

- Developed a microservice application using Java Spring and ReactJS
- Tested the backend in JUnit and the frontend in the Jest framework
- Executed integration and smoke tests on the application

Car Rental Web Application

- Developed a fully functional responsive web application with a dual dashboard (admin/customer)
- Wrote backend unit tests in PHP and frontend tests in Selenium

Secure Software System Development Project

- Built 2FA, email/SMS verification, and time-expiring password reset workflows
- Implemented credential-breach detection across user password history
- To view all projects, visit [my GitHub profile](#).
